

# Patient\* Triage, Imovax Rabies Vaccine Recall, April 2, 2004

(\*who received Imovax rabies vaccine from 9/23/03 through 4/2/04  
from vaccine lots X0667-2, X0667-3, W1419-2, and W1419-3)

<sup>a</sup>. Previously immunized = 3 previous doses for pre-exposure or post-exposure.

<sup>b</sup>. Any vaccine regardless of whether that vaccine was in the recalled lots.

<sup>c</sup>. If PEP was discontinued because the animal was found to not have rabies, the patient should complete series using non-recalled vaccine (i.e., total of 5 doses of vaccine including any already given.)

<sup>d</sup>. If < 7 days since completion of 3 doses, the additional 2 doses should be given at days 7 and 21 after last previous dose.

<sup>e</sup>. Typical 5-dose PEP schedule = vaccine on days 0, 3, 7, 14, 28.
